

What do I want to learn or understand better?

Right now I need to know more about agile/scrum practices and workflow. It feels like right now that this is the highest priority for us to get going. Most questions in the group right now revolves around this subject and I want to be able to contribute

How Can I help someone else, or the entire team, to learn something new?

For the time being, before we start working, all I can do is help the others by giving my input. I don't feel like there is anything really that I can teach others from the start right now.

What is my contribution towards the team's use of Scrum?

We haven't started this yet so I have not yet contributed.

What is my contribution towards the team's deliveries?

I have expanded on the project idea and quickly put down some info about that. Nothing else really.
