

What do I want to learn or understand better?

As I am still learning all the applications and how their connections, and this is still my prior focus. More concrete I am interested in the connection between the backend and frontend, and how the parts differ in structure

How can I help someone else, or the entire team, to learn something new?

While not being afraid to ask “stupid” questions, the programming process slows down when people with knowledge takes time to explain to me. This helps everyone involved in the coding process, since i might ask questions other might not know and the programmer who understands the issue needs to explain it, possibly increasing his understanding of the system itself. This week I have also started to write code with help of my fellow teammates, which made me have to understand every line of code written, hopefully making my teammates ability to teach and explain greater.

What is my contribution towards the team’s use of Scrum?

By being a driving force in the sprint planning as well as bringing up questions and taking notes from the meeting with our supervisor, I pinpointed factors relevant for the teams progress in the coming sprint. I also were responsible for the team reflection.

What is my contribution towards the team’s deliveries?

This week I, apart from being a driving force in the sprint planning aswell as retrospective, have mainly contributed to writing the code of the “Create tournament” page, including design and functionality.
