Individual Reflection Anton Rödholm 27/3:

What do I want to learn or understand better?

Would like to know more about the practical approach and how to get started in the SCRUM-process. I want to understand what roles that are available and how to take on different roles. Would like to learn the more programming details, where my group members probably will be of great help.

How can I help someone else, or the entire team, to learn something new?

Since we are two from Industrial Engineering and management and five from IT I would like to bring insights to what value the external part could take and how to guide our coding/software programming in that direction. I can help people by asking questions so that everyone is on the same page, sometimes it could be obvious that not everyone is following the discussion.

What is my contribution towards the team's use of Scrum?

Since we have not structured our work then it could be hard to say, but I hope to learn more programming together with other people and in a team try to solve the problem. I think I could contribute in the process of slicing a task in smaller problems and then tackle them from there, including dividing the work within the team.

What is my contribution towards the team's deliveries?

This week I took responsibility of forming the Social Contract and providing a draft where we could have further discussions on what we would include. By reading some literature on what would be appropriate to include I think we have a draft which is plausible.
