Individual Reflection Anton Rödholm 28/4:

What do I want to learn or understand better?

This week has mostly been a learning session for me, since our project is quite advanced in the sense that many different technologies and applications are integrated and for a user which haven't worked in any of these before it's a lot to take in. Therefore I, for the sprint to come, want to continue improve my ability to see the connections between different parts of our application learn efficient ways to produce code.

How can I help someone else, or the entire team, to learn something new?

By continuing asking questions to understand the project and programming features as a whole, my team members practices their explanation skills, aswell as themselves understand the project better.

What is my contribution towards the team's use of Scrum?

Structuring tasks, bringing a positive attitude, encouraging teamwork and trying to make everyone feel responsible as a team.

What is my contribution towards the team's deliveries?

This week, not so much since I have been busy learning from my very talented members. I look forward to next week be able to write some code!
